Profile

I am a passionate programmer who is eager to learn and addicted to challenges. Currently, I am pursuing a degree in Systems Analysis and Development at UNIASSELVI, and I have been dedicating myself to web systems development with **Django** and **React**.

I have been exploring features such as user authentication. Additionally, I have skills in front-end development with **HTML, CSS**, and **JS**, and I use Git and Github for code versioning.

I have knowledge in database management with **MySQL** and **PostgreSql**. I constantly strive to improve the quality of my code by studying software architecture, design patterns, and best programming practices. I am active in online developer communities, sharing knowledge and participating in personal projects. In addition to my skills,

I have knowledge of **Docker**, which allows me to efficiently create and deploy development environments. I am excited to take on new challenges and continue my growth as a developer, always striving for excellence in the field.

Professional Experience

Front end Development(Freelance / Nov 2023)

Start Profissionalizantes

I assisted in conveying front end knowledge through mentoring sessions , focusing on topic such as responsiveness and front end web development.

My responsabilities included facilitating the transmission of skills and knowledge related to front end technologies

Education

UNIASSELVI

System Analysis and Development */ Studying (Conclusion December 2023)*

Languages

English – Advanced
Spanish – Basic

Extracurricular Courses

Start Profissionalizantes
  - Complete Python Development

Udemy
  - Web Development with Django
  - Python 3 from Basics to Advanced
  - Advanced Git and Github
  - SQL Database
  - Development with Python
  - Complete Web Development
  - Advanced Flask
  - Docker for developers

Alura
  - CSS Grid
  - HTML and CSS
  - JavaScript

Recent Project examples :

1 - Complete Django login system: https://github.com/Reis567/login-django
2 - Simultaneous communication chat with Django: https://github.com/Reis567/chat3Django
3 - Inventory management system with Django: https://github.com/Reis567/storage-management
4 - To-do list with Django: https://github.com/Reis567/django_todo_list
5 - Django weather app: https://github.com/Reis567/weather-django
6 - Strong password generator front end: https://github.com/Reis567/passGenerator
7 - Web application for image search: https://github.com/Reis567/search_img
8 - Python contract generator: https://github.com/Reis567/contract_maker
9 - Internet service provider landing page: https://github.com/Reis567/plan-pricing
10 – React contacts Crud : https://github.com/Reis567/lestereact2
